DATADOMUM RECORDER

"The modern solution for structured conferences and spontaneous meetings."

„Datadomum Recorder" records and archives meetings, facilitates the preparation and follow-up of meetings and integrates into existing conference situations.

- Intuitive control thanks to innovative operating logic
High contrast, intelligible functions and a sensibly structured surface provide for a operation despite many possibilities.

- Play the meeting during the recording
Check the correct recording or start with the creation of the protocol, although the recording is still running.

DATADOMUM RECORDER

"DATADOMUM RECORDER stores meetings and conferences digital, reliable and secure."

Agenda items, speaker markers & universal markers

Use the different marker types to structure the your session. If required, import markers from csv files, via copy & paste or directly from a council information system.

Full-text search

Filter prepared and set markers and allow them to be used, for example to view all speeches of a specific party or person.

Increasing the playback speed

The playback of the meeting can be increased; without any pitch shift or loss of audio quality.

DATADOMUM RECORDER

*"A demo version is
available for download at
www.datadomum.com"*

Volume-controlled recording

This feature allows recording to start automatically whenever speeches take place.

Compatible with meetings from steno-s

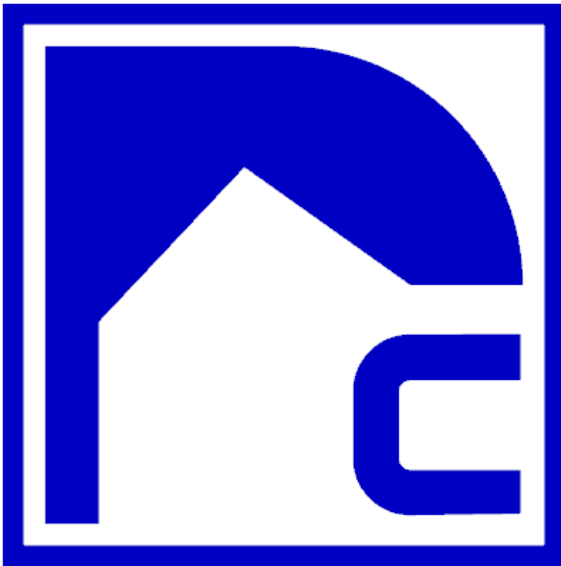

Meetings from steno-s 4 are seamlessly integrated into Datadomum Recorder. Recordings from previous versions of steno-s are converted to the current format.

Free Player mode

Install the software on any number of computers to play recorded meetings.

DATADOMUM CONFERENCE

*"High speech intelligibility
is a key feature of the
Datadomum Recorder."*

Integration von Conference Systems

With the "Conference" add-on module for the Datadomum Recorder, you control delegate units with a click in the graphical room view. In addition, use the automatic marker function to automatically mark the speeches with the respective speaker names.

Virtual Conference System

No conference system at hand? No problem! Assign virtual delegate units to your speakers and also profit here from the room view and a semi-automatic marker allocation.

Speech time recording

When using a classic or virtual conference system, speaking times are recorded and stored digitally.

DATADOMUM DISPLAY

*"Visualization of conferences
and meta-information with
DATADOMUM DISPLAY."*

Digital Information System

The "Display" add-on module for the Datadomum Recorder visualizes session data on large screens and informs guests and participants about the progress and content of your conferences.

Presentation of session data

Agendas, speaker lists, speaking times, contingents, voting results and resolutions are automatically displayed on multiple display devices.

Extended speaking time control

Together with the "Conference" module, speaking time recording is supplemented by comprehensive speaking time management.

DATADOMUM MEDIACONTROL

*"Integrates perfectly in
complex conference situations"*

Remote control of Datadomum Recorder

With the aid of the "Mediacontrol" add-on module for the Datadomum Recorder, you control the recording, set markers and use additional functions via the media control interface.

Easy access via network

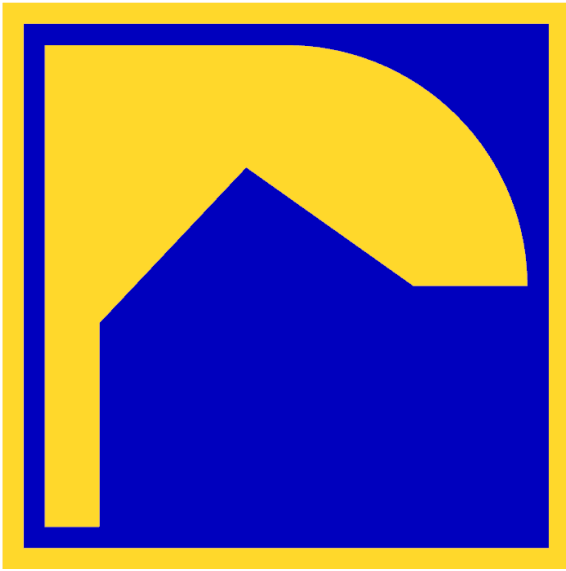

No matter if near or far, control over TCP/IP provides reliable, low-latency control over your conferences and integration with existing systems, applications, and workflows.

Monitoring

Integrate the Datadomum Recorder into your monitoring systems and monitor the proper recording of your sessions.

*"A complete overview of all programs, functions and additional modules, as well as information on prices and conditions, can be found at:
